

Achieve True Success in Healthcare Interoperability

Powering Digital transformation with interoperability

About Us

Dinoct empowers regulated businesses to achieve interoperability, enhance reliability & security and maintain compliance posture of cloud workload. Our mission is to be the trusted partner for our client's digital transformation goals.

Using best practice principles, industry standard framework and controls like NIST CSF, CIS, HL7 FHIR® HL7 v2®, DICOM®, we design, build and manage cloud workloads for the technology stack. Policies and procedures are customized to meet the HIPAA, HITECH, PCI, GDPR and other regulatory requirements.

As an AWS and Google Cloud partner with certified engineers, healthcare, life science & financial industry expertise, we bring best-in-class solutions to protect digital assets and minimize risks.

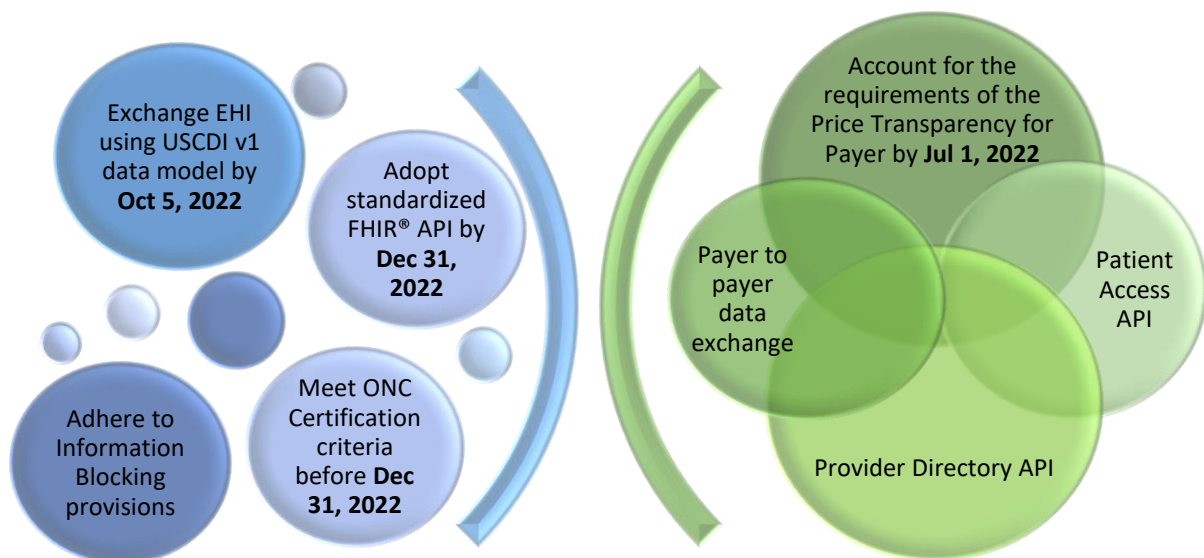

What makes us stand out?

01. Turnkey solution to build & streamline right cloud for your workload, security & scale
02. Fully managed & compliant platform & solutions for your regulated apps
03. Right people, process and tools to monitor, secure and optimize your assets, automate and improve governance.
04. Improved operational efficiency with best practice policies, process & automation
05. 24/7 Security & performance monitoring and customer support
06. Adheres to industry regulations

Meet the Deadline for the Interoperability Regulatory Challenges

Stay ahead of penalty before it becomes a problem

Implementing interoperability in healthcare is not a simple task—it comes with its unique set of challenges in terms of various standards and technologies available.

21st Century Cures Act

Patient Access Final Rule

Grow to New Heights with our Advanced Integration Solutions

HL7 FHIR Solution

Key Features:

- ❖ Convert HL7 v2 messages to FHIR R4, Json & xml
- ❖ Highly scalable and HIPAA Compliant integration engine
- ❖ Monitoring & Alerting capabilities

Key Benefits:

- ❖ Standardized APIs
- ❖ Enhanced interoperability
- ❖ Compliance with industry standards & regulations.

HL7 v2 Integration

Key Features:

- ❖ Accepts & stores health data in FHIR format
- ❖ Facilitate security & hosting capabilities
- ❖ Highly scalable data store

Key Benefits:

- ❖ Enhanced interoperability
- ❖ Provides faster, real-time access to data in a readable format.
- ❖ Adherence to regulatory requirements

DICOM/PACS Engine

Key Features:

- ❖ Ability to store, process, transfer & view the medical Images
- ❖ Import DICOM data from PACS to DICOM Store
- ❖ Highly scalable and HIPAA compliant.

Key Benefits:

- ❖ Facilitates interoperability
- ❖ Friction less data exchange
- ❖ Customized workflow

Hear out our satisfied clients!

Dinoct's fully hosted and managed HL7 integration solution has the flexibility to scale and incorporate changes as business demands at a reasonable cost. Its developers worked directly with the integration team to fine tune the capability and capacity. Their team and their software solutions have been key in helping us to support our healthcare clients. We had a very positive experience working with Dinoct Solutions.

Keerthi Kanubaddi
CEO, ReadySet Surgical

Dinoct has handled our HL7 interface development and support and we've been very pleased with the interface engine software as well as their customer service and technical expertise. We now have production interfaces with a number of hospitals that help us retain our customers' business.

Srinivas Raghavan
CTO, ReadySet Surgical
